

Virtual CISO

Working as an integral part
of your security team

Manoj Bhatt
Head of Cyber Security
Advisory and Consulting

Why use a vCISO?

- › Immediate leadership to deal with security incidents, breaches and managing your organisations threat and risk profile
- › Ensure legal and regulatory best practice and compliance
- › Protect the business and management risk inherent in any IT transformation
- › Immediately address security skills shortages

What does a Telstra Purple vCISO deliver?

- › Provide strategic advice to address business priorities and evolving security threats
- › Chair information security steering committees
- › Represent information security at board level
- › Interface with regulators, banks and other compliance regimes
- › Provide information security architecture and design
- › Deliver information security projects including managing the program and technical resources
- › Access to managed security services protecting against threats and vulnerabilities, and security assessment services such as penetration testing of servers

“ Our vCISOs deliver on demand access to top-flight security professionals who can provide advice and assistance whenever required. ”

The need for a vCISO

A CISO might seem unattainable for some, however smaller organisations are in no way immune to these security concerns. It's also true that a full time CISO is not the right fit for everyone.

The Telstra Purple vCISO is subscription based and can flex according to your demands. It offers substantial savings against hiring a permanent CISO and significant advantages in skill and experience against appointing or assigning CISO responsibility internally.

Experienced Security Leaders

Telstra Purple vCISOs are senior information security leaders with experiences of security management and driving improvement and change in both technology and practice. They're capable of working seamlessly with your organisation to define, articulate and drive information security strategy.

Our seasoned security experts are technically proficient and able to advise on the architecture and design of solutions, as well as the direct management of technical resources to deliver projects faster and at lower risk.

Why Telstra Purple?

We believe it's people who give purpose to our technology, and it's the power of purposeful technology that inspires people. Putting purpose and people at the core of everything we do brings a brilliantly connected future closer to your reach.

Today's ever-expanding digital landscape poses a growing number of security threats to organisations and their employees, and it can be challenging to identify, implement and maintain the right safeguarding measures. Recent escalations in fines for data loss show that it's not just hackers that put organisations at risk, the threat landscape is rapidly changing and is still not fully mature or widely accredited. Our team of highly skilled and experienced Security Consultants and Engineers work with our clients to protect what is unique to them, whilst enabling them to focus on their core business.

About Telstra Purple

A team of 1500 technology experts across the globe specialising in network, cloud, security, collaboration, mobility, software, data and analytics, and design.

Built on a foundation of acquisitions we are a powerhouse of demonstrable experience and expertise.

We're committed to collaboration. We bring the best people across our organisation together with yours to design, build and deliver outcome-based solutions.

We've built strong partnerships with industry leading vendors including Microsoft, AWS & Cisco but always deliver purpose-built solutions, with people at the centre.
