

Microsoft 365 Security Optimisation Service

Streamline your security footprint.
Simplify your licensing and support model.

Carina Hotson
Head of Strategy and
Transformation, Telstra Purple EMEA

Fact Sheet

Most organisations have already migrated to Windows 10 or are in the process of doing so. Similarly, many organisations are migrating their messaging platforms to Office 365 while also consuming Azure Active Directory or InTune services, or both.

Microsoft 365 (M365) combines Windows 10, Office 365, and the Enterprise Mobility & Security suite into a single bundle, which simplifies licensing and consolidates the management of your Modern Workplace and Security estate into a single platform.

Using our in-depth Microsoft product expertise and heritage security compliance abilities, we will assess your current security footprint and align it to the M365 offering. We will define a recommendations roadmap to transform your estate to a simplified cloud-managed single platform aligned to best practices, compliance frameworks, and business needs.

What you get:

- An assessment of your current security tool footprint, to map these tools to their M365 counterparts for compliance with your security strategy.
- A functional GAP analysis to identify gaps and associated risk.
- A review of your current licensing model against M365 options to identify areas of savings.
- Proof-of-Concept (PoC) implementation for the chosen tools to demonstrate capability, performance, and suitability.
- Creation of a full implementation plan and bill of materials to manage the delivery timelines and project cost.
- Roll-out and management (if required) of the full solution.

Why Telstra Purple?

We bring a wealth of hands-on experience from different industries, use cases and geographies across our global network. Our experts orchestrate your technology into a solution that's purpose-built for your requirements. Throughout our delivery, we'll collaborate as peers, sharing knowledge and skills with your teams.

We offer independent, multi-vendor certified expertise across a host of leading technology providers. Our architectural experience has breadth and depth across Private, Hybrid, Container and PAAS services.

- **Agility:** Our capabilities span C-level expertise to Security experts, who can work with you for more timely and effective delivery.
- **Speed and time:** We deliver real impact, fast. This lets you focus on your day-to-day responsibilities.
- **Experience:** Your delivery becomes more effective and efficient with the benefit of our methodology and IP from previous engagements.
- **Tech disruption experience:** Telstra Purple deeply understands the disruptive technologies across Cloud, Analytics, Security and Networks that will form part of a next-generation operating model.

Our tried and tested 4D methodology

Phase 1 – Discover

Identify the current Microsoft licensing in place, the security tools in use within the organisation, the licensing and support details/costs for each, and identify the current strategic roadmap for Modern Workplace and Security. In addition, the current Modern Workplace footprint will be reviewed for alignment with the Office 365 suite.

Phase 2 – Define

Conduct mapping exercise to align current tools against M365 equivalent. Conduct gap analysis on feature set of all products to demonstrate capabilities of M365 suite. A gap analysis will be produced detailing 'as is' vs 'to be' with respect to the Microsoft security offering. Similarly, the Office 365 components will be functionally compared with the current on-premise services. Produce migration plan for each product and design documents created for transformation.

Phase 3 – Deliver

Implement PoC for each chosen tool. Refine designs based on outcome and if successful, migrate chosen tools to production, with detailed documentation produced. If in-scope, create gold build for Windows 10, package applications, implement SCCM/Intune and deploy to devices. Create the hybrid messaging environment and migrate mail to Exchange Online. Migrate data to SharePoint and OneDrive, implement Teams and secure the whole environment with EMS.

Phase 4 – Drive

Once the solution is implemented, Telstra Purple can manage the day-to-day operations and support. In addition, the security components can feed in to our managed SOC solution to give you peace of mind.

About Telstra Purple

Telstra Purple is the largest Australian-owned, global technology services business. It brings together Telstra Enterprise's business technology services capabilities and a number of its recently acquired companies. Telstra Purple is focused on outcomebased, transformative tech solutions. Our broad capability consists of over 1,500 certified experts in network, security, cloud, collaboration, mobility, software, data and analytics, and design. Diverse by design, our differences bring a radically open minded approach to every idea, process, and solution we create together.
