

Virtual CISO

Working as an integral part of your security team

Why use a vCISO?

- Immediate leadership to deal with security incidents and breaches, and ability to manage your organisations' threat and risk profile
- Ensure legal and regulatory best practice and compliance
- Protect the business and management risk inherent in any IT transformation
- Immediately address security skills shortages

What does a Telstra Purple vCISO deliver?

- Strategic advice to address business priorities and evolving security threats
- Chair information security steering committees
- Represent information security at board level
- Interface with regulators, banks and other compliance regimes
- Information security architecture and design
- Information security projects including managing the program and technical resources
- Access to managed security services protecting against threats and vulnerabilities, and security assessment services such as penetration testing of servers

“Our vCISOs deliver on demand access to top-flight security professionals who can provide advice and assistance whenever required.”

The need for a vCISO

A CISO might seem unattainable for some, however smaller organisations are in no way immune to these security concerns. It's also true that a full time CISO is not the right fit for everyone.

The Telstra Purple vCISO is subscription based and can flex according to your demands. It offers substantial savings against hiring a permanent CISO and significant advantages in skill and experience against appointing or assigning CISO responsibility internally.

Experienced Security Leaders

Telstra Purple vCISOs are senior information security leaders with experience in security management, and driving improvement and change in both technology and practice. They're capable of working seamlessly with your organisation to define, articulate and drive your information security strategy.

Our seasoned security experts are technically proficient and able to advise on solution architecture and design, as well as the direct management of technical resources to deliver projects faster and at lower risk.

Contact your Telstra account representative for more details.
